## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/29/2007 has been entered.

2. Prior rejection over Cengel et al. is withdrawn in view of the declaration of Jacob Emert, filed 1/29/2007. The declaration indicates that the polymers described in the reference would not be expected to include the required amount of terminal vinylidene content.

### ***Information Disclosure Statement***

3. The information disclosure statement filed 11/17/2006 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but references AM and BN have not been considered.

***Claim Rejections - 35 USC § 112***

4. Claims 1-9, 12 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

(a) Claims 1, 12 and 13 (and claims 2-9 as dependent thereon) include the phrase "in the substantial absence of halogen." This phrase was previously assumed to require that while halogens may be present in incidental trace quantities in the process, no halogen or halogenated compounds may be added as process components. However, further review of the specification reveals that halogenated compounds are recommended for both the free radical inhibitor and the sulfonic acid at pages 7-8. Accordingly, the intended scope of "in the substantial absence of halogen" cannot be determined.

***Claim Rejections - 35 USC § 102/103***

5. Claims 1-9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over EP 744393.

The reference discloses in Example 1 the reaction of polyisobutene, maleic anhydride and a reagent which would function as a free radical inhibitor (including phenothiazine and other examples), including all claimed limitations except for a reporting of the terminal vinylidene content and the functionality. However, the claimed terminal vinylidene content would appear to be inherent because the reference has stated that highly reactive PIB has been used, and would therefore be expected to

Art Unit: 1713

exceed the required level of 50%. In the alternative, one of ordinary skill in the art would be motivated to use PIB of the claimed vinylidene content because the reference recommends the use of highly reactive PIB. The claimed functionality would appear to be inherent because applicants have claimed essentially all (claim 8) or a substantial portion of (claim 9) the range of conventional functionalities; in the alternative, one of ordinary skill in the art would be motivated to use analogous conventional reactive PIB within the claimed range in methods analogous to those of the reference examples because applicants have claimed broad ranges of conventional values. The burden of proof is shifted to applicants to show that the reference examples do not include the claimed unreported properties.
